Safety and Ergonomics Project

Scenario: You have been hired as an intern at a local business. The office manager, Dale, has assigned you the task of evaluating the current ergonomics at the place of business. He would like you to identify areas within the business to improve human services safely and develop a functional work environment, equipment needs, and required utilities for the employees. You will conduct an oral presentation outlining the improvements for the business.

Individually, you will create and present a 5 to 7 minute oral presentation to the class. The project can be based on an actual place of business or a faux one. The presentation must include:

- your evaluation of the current ergonomics at the place of business
- ways of improving human services safely at the workplace
- ideas for developing a functional work environment, equipment needs and required utilities for employees and the business
- drawing of the layout of the business to identify locations suitable to offer human services safely such as accessibility to transportation, safety and security

The project will be assessed with Rubric for Oral Presentation.
